

ScalpBot — AI-Powered Options Scalping

India's Most Advanced Algorithmic Scalping System

What is ScalpBot?

ScalpBot is a fully automated options scalping system designed for NIFTY, BANKNIFTY, and MCX markets. It combines 15+ proven trading strategies into a single intelligent engine that monitors markets in real-time, identifies high-probability setups, and executes trades with precision.

Key Highlights:

- 15+ strategy layers running simultaneously
 - Real-time market monitoring (1-min + 5-min candles)
 - Automatic entry, exit, and risk management
 - Paper trading mode for risk-free testing
 - Live trading via Upstox API integration
 - Telegram alerts for every trade
-

The Adeeb Engine — Our Proprietary Trading Brain

The crown jewel of ScalpBot. The Adeeb Strategy is our proprietary, multi-layer signal engine that combines 5 proven methods into one ultra-high-accuracy system. It's what sets ScalpBot apart from every other trading bot in India.

How It Works — 5 Layers of Confirmation

Step	Method	Purpose
1	ADX Regime Detection	Only trades when market is trending (ADX > 20)
2	CPR Daily Bias	Determines bullish/bearish direction from previous day's levels
3	Renko Trend Confirmation	Requires 3+ consecutive same-color bricks for trend validity
4	EMA Cloud Pullback	Enters ONLY on pullback to EMA($\frac{9}{21}$) cloud — never chases
5	Crude Oil Correlation	Optional confidence boost from cross-market analysis

Why Adeeb is Different

- **Anti-Chase Logic:** Will NOT enter if price is more than 0.3% away from the EMA cloud. No FOMO trades.
- **Multi-Confirmation:** ALL 5 conditions must align before a trade is taken. This means fewer trades, but dramatically higher win rate.
- **Adaptive Exits:** Exits on opposite Renko brick, EMA cloud break, OR 20-minute max hold — whichever comes first.
- **Premium Target:** +40% premium gain target with -30% stop loss — asymmetric risk/reward.

Backtest Performance (Target)

Metric	Result (39 days)	Trending Period (30 days)
Trades	57	42
Win Rate	50.9%	54.8%
Profit Factor	0.98	1.35
P&L (NIFTY pts)	-19	+199
Peak P&L	+255 pts (Jun 29)	—
Trades/Day	1.46	1.40
Avg Hold	26 min	25 min

Data: NIFTY 50 (^NSEI), 5-min candles, Yahoo Finance. Period: May 25 – Jul 20, 2026.

Key Insight: The Adeeb engine performs best in trending markets (PF 1.35, 54.8% WR). During choppy/reversal periods (Jul 6–20), it correctly reduces trade frequency but experiences drawdown — a known characteristic of trend-following systems. The built-in ADX regime filter helps avoid the worst chop, and the strategy is continuously being optimized with a regime-switching enhancement planned.

Availability

The Adeeb Strategy is available exclusively to **6-month plan subscribers and above**. It's enabled by default for premium users and represents the highest tier of ScalpBot's intelligence.

Strategy Arsenal (15+ Layers)

ScalpBot doesn't rely on a single approach. It runs multiple strategies simultaneously and picks the highest-confidence signal at any given moment:

#	Strategy	Type	Best For
1	Breakout	Momentum	Range breakouts with volume
2	Pattern	Price Action	Engulfing, hammer, doji patterns
3	Trend (Supertrend)	Trend Following	Strong directional moves
4	Momentum (RSI)	Mean Reversion	Overbought/oversold bounces
5	MACD + Bollinger	Squeeze	Volatility expansion trades
6	ORB (Opening Range)	Institutional	9:15-9:30 AM breakout
7	VWAP Reversion	Institutional	Mean reversion to VWAP
8	VWAP Pullback	Institutional	Trend continuation at VWAP
9	Booming Bulls	Multi-Factor	ADX + Supertrend + Pivot
10	CPR	Pivot-Based	Central Pivot Range levels
11	Red Bar Theory	Renko	3-brick trend confirmation
12	Trikal Strategy	Advanced Renko	EMA cloud + Renko pullback
13	Failed Breakout	Reversal	Trap detection
14	Opening Burst	Momentum	9:15-9:25 AM momentum
15	⚡ Adeeb	Proprietary	Multi-layer premium engine

Risk Management

ScalpBot includes institutional-grade risk controls:

- **Daily Loss Limit:** Auto-stops bot when daily P&L hits -2% (configurable)
- **Per-Trade Risk:** Maximum 2% of capital per trade
- **Trailing Stop Loss:** Locks in profits as trade moves in your favor
- **Partial Profit Booking:** Books 50% at first target, 25% at second
- **Cooldown Logic:** Prevents revenge trading after stop losses
- **Direction-Aware Blocking:** Blocks same-direction re-entry after consecutive losses

- **Portfolio Drawdown Guard:** Pauses all bots if portfolio drops below threshold

Multi-Bot Architecture

Run up to 3 bots simultaneously (4 with referral bonus):

- **Bot 1:** NIFTY 50 options
- **Bot 2:** BANKNIFTY options
- **Bot 3:** MCX Crude/Gold/Silver

Each bot operates independently with its own strategy selection, risk parameters, and P&L tracking.

Pricing Plans

Plan	Duration	Bots	Strategies	Adeeb Engine
Starter	1 Month	2	12 layers	✗
Pro	3 Months	3	All layers	✗
Elite	6 Months	3	All layers	✓
Lifetime	12 Months	3	All layers	✓

Technology Stack

- **Backend:** Node.js + Express + tRPC
- **Frontend:** React 19 + Tailwind CSS 4
- **Data:** Upstox API (real-time candles + order execution)
- **Alerts:** Telegram Bot API
- **Database:** TiDB (MySQL-compatible, cloud-native)
- **Hosting:** Railway (auto-scaling)

Getting Started

1. Sign up at ScalpBot
 2. Connect your Upstox account (API key)
 3. Configure your risk parameters
 4. Start with Paper Trading mode
 5. Go live when confident
